<p>Nombre:.....Curso:.....</p>			

WATCH THE VIDEO “WHAT IS SCIENCE?” AND CHOOSE THE CORRECT ANSWERS:

- 1. He build his own definition of science because:**
 - a. It was too hard to get it.
 - b. Most of definitions he found did not englobe all the aspects of science.
 - c. He preferred climbing mountains.

- 2. His definition includes the concept “*natural world*”. It is:**
 - a. Everything related to cooking.
 - b. Everything that is not “supernatural”, like religion.
 - c. Everything that can be explained.

- 3. He says that to make “*observations*” is...**
 - a. Important collect information from sight not from other senses.
 - b. Better to use instruments such as microscopes or telescopes.
 - c. Sufficient to look at microorganisms or stars.

- 4. He states that be “*objective*” means:**
 - a. Be accurate (Put the exactly amount of sugar in the juice).
 - b. Be curious (To discover new things)
 - c. Be open-minded (Do not have expectations about our observations).

- 5. He defines “*experiment*” as:**
 - a. It is put in practice an idea to prove it.
 - b. It is the observation of a phenomenon in which we control things, like time.
 - c. It is a test only possible to carry out in a laboratory.

- 6. Repeat the observation of experiments is important because...**
 - a. May be we do not perform properly the first time.
 - b. To discard an idea when the experiment fails and to look for the truth.
 - c. Other scientists can design it better.

- 7. Once make observations and experiments we have to organize and gather the information:**
 - a. So you can write a lot of books.
 - b. To avoid other scientists steal your ideas.
 - c. In this way other persons can use your discoveries.

- 8. Science is constantly under revision. It is “*self-correcting*” because:**
 - a. If enough evidences against an idea are discovered, this idea will be discarded.
 - b. If some error is discovered, it is immediately hidden.
 - c. It constantly changes its point of view about the reality.
